

Martina Calamusa obtained her Bachelor's Degree in Biology in 2001 and completed her PhD studies in Neuroscience in 2005, both at the University of Pisa.

She received fellowships from the Neuroscience Institute of CNR and earned a postdoctoral position at the Scuola Normale Superiore and at the Baylor College of Medicine in Houston. She was Awarded with Scuola Normale Superiore Grants “Young researchers 2003” and “Young researchers 2004” for different research projects focused on the role of neurotrophin-4 in the development and function of rodent retina. She was selected to participate to “Fundamental Issues in Vision Research” course organised by National Institutes of Health (NIH) in 2004 and to “Structure, function and development of the visual system” course, at Cold Spring Laboratories, in 2005.

She has a strong background in the biomedical field, acquired by doing bench research for almost ten years.

Since 2014 she has been working in the Scientific Research and Technology Transfer Division at the University of Trento as Research facilitator.
